History of Dental Polymeric Materials. The modern era's use of dental polymers began with natural rubber for dentures. Vulcanized rubber, a plant-derived latex crosslinked with sulfur, was introduced as a denture base material in 1853. At about the same time, celluloid, a nitrocellulose material used to make billiard balls and detachable shirt collars, was adapted as a denture base material.

Prick tiny bits of gunk from nasty places with these U.S. made hardened stainless steel dental tools. But please don't use them for dental work. They are slight seconds, and some may have been re-worked which only matters to teeth. Trim excess glue from models, place a barrel on the deck of the ship-in-a-bottle, clean a rasp. If you need the strength and durability in a tiny pick, you need ...
